

Central Valley Region

Check out the Central Valley's regional water and land-use integration profile! This diverse region is home to over 2 million people and grows over 230 different crops. This means that water is in high demand, and water resources must be carefully managed. California's Central Valley is quite sensitive to changes in land use and water supply, especially in the face of climate change impacts. Find out how land-use policy and water resource management can be integrated through equitable and resilient solutions in Central Valley's Story Map:
